I think our existing documents do state that DoC should take account of uncertainty. I don't think that needs to be re-stated in the bathymetry discussion.

do we need to call it EoC/DoC? and do we want to identify that the DoC is being set with some accounting of uncertainty. probably not needed as this is likely to be elsewhere, but thought i'd ask.

Haggard asked about bathy measurements text yesterday. We said we would get something off to them soon (as in today)

Benny had said he had no additional comments on the text.

Ed/Bruce (others) are we ready to go with this text?

Please let me know asap.

Thanks
